

Does chocolate make you intelligent?

“Franz Messerli [...] had the idea of verifying in a very theoretical way the impact (of chocolate consumption) on intelligence. To estimate chocolate consumption, he referred to the sales of the largest producers in 22 countries around the world. To measure intelligence, what better way to measure than the number of Nobel Prizes? [...]

The researcher, not without sarcasm, said he was amazed by the results observed. The higher the per capita consumption of chocolate, the more likely a territory has received a Nobel Prize, compensating for population. [...]

However, these results do not surprise Eric Cornell, distinguished in 2001 for his work in physics. "National chocolate consumption is correlated with a country's wealth, and high-quality research is also correlated with the wealth of a country. [...] There is, however, no link between the two."
